

Spotify Wrapped

Project Report

Objective

This analysis tests my SQL and Tableau skills by recreating my 2025 Spotify Wrapped and identifying additional listening patterns through a fun project.

Data

The dataset contains the following columns:

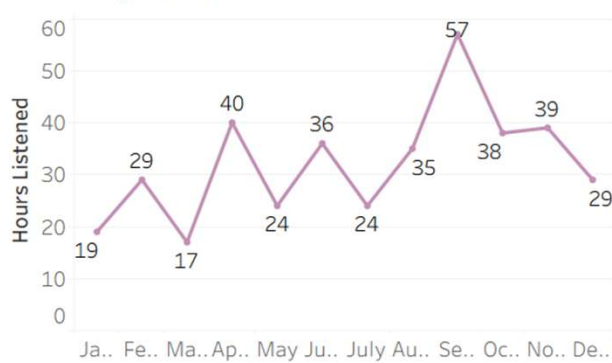

- **Artist Name:** The name of the artist.
- **Track Name:** The title of the song.
- **End Time:** The timestamp of when the song was played.
- **Ms Played:** The duration of time spent listening to a track in milliseconds.

Tools

- PostgreSQL
- Tableau

290 Days Streamed	393 Hours Listened	787 Total Artists	2,363 Total Songs
----------------------	-----------------------	----------------------	----------------------

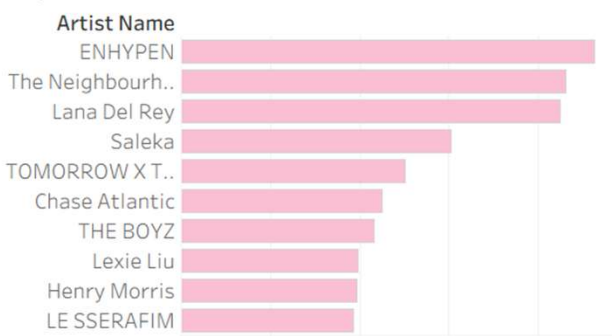

monthly streams

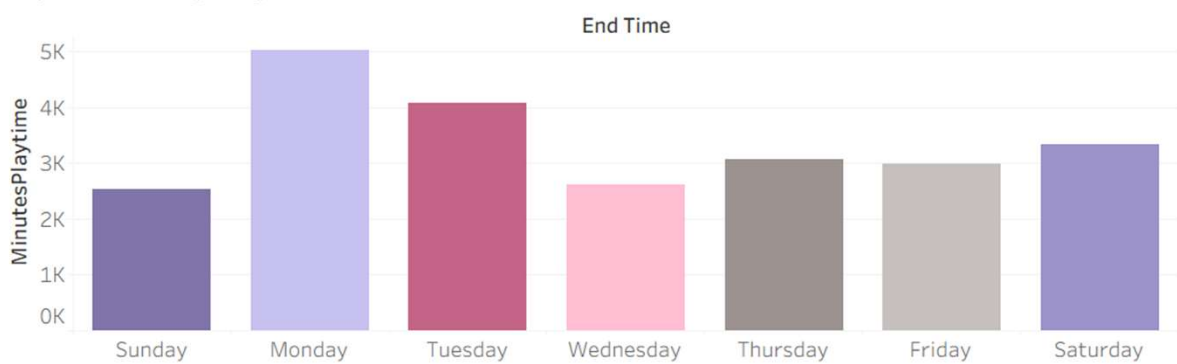

top 10 songs by total counts

top listening day

SAMPLE DASHBOARD

monthly streams

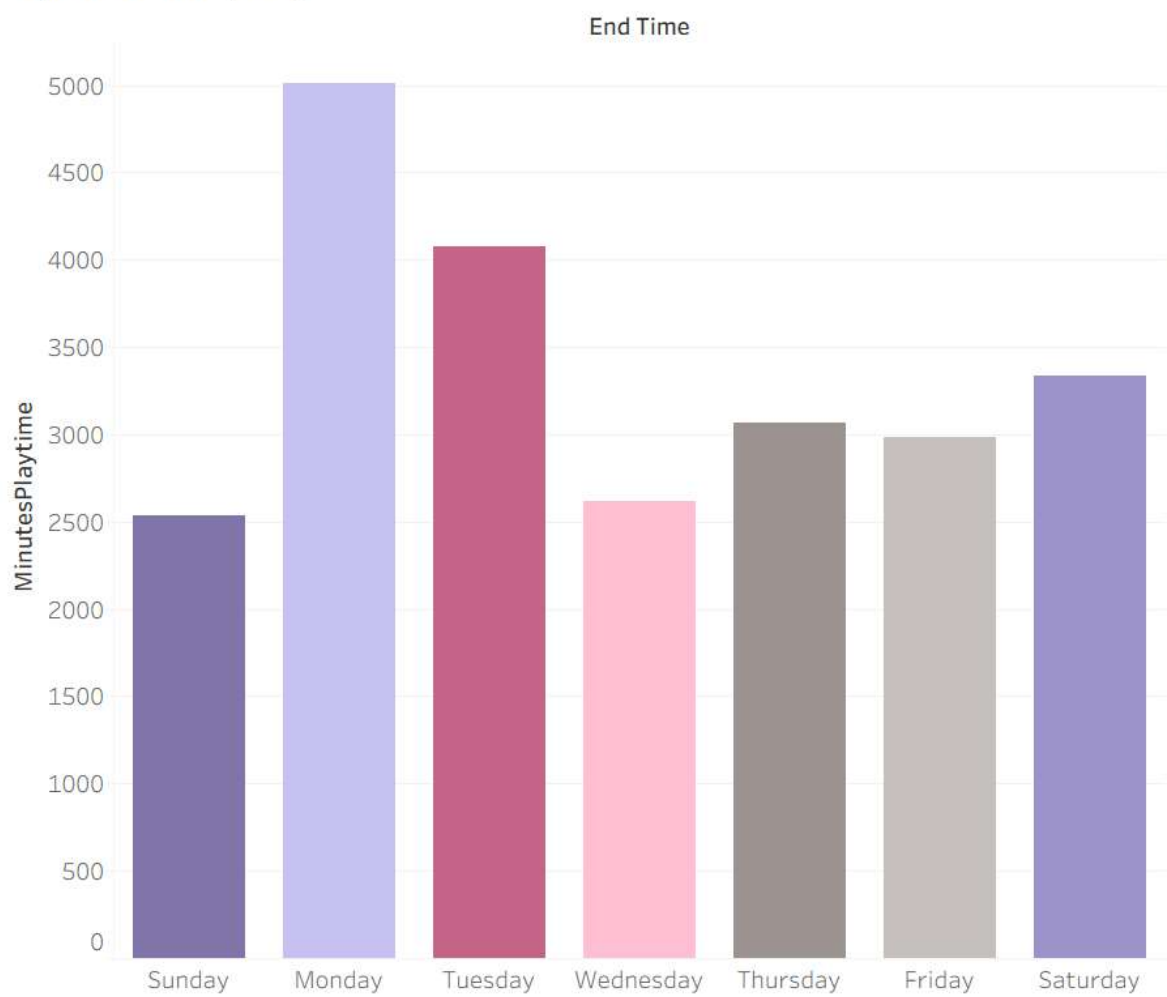

The trend of Hours Listened for Months Month. The marks are labeled by Hours Listened.

September has the highest listening hours, with 57 hours.

Since I mostly listen to music while doing homework, I can attribute these hours to my Data Mining class assignments, which took hours to complete in Excel before I learned how to automate those tasks with R.

top listening day

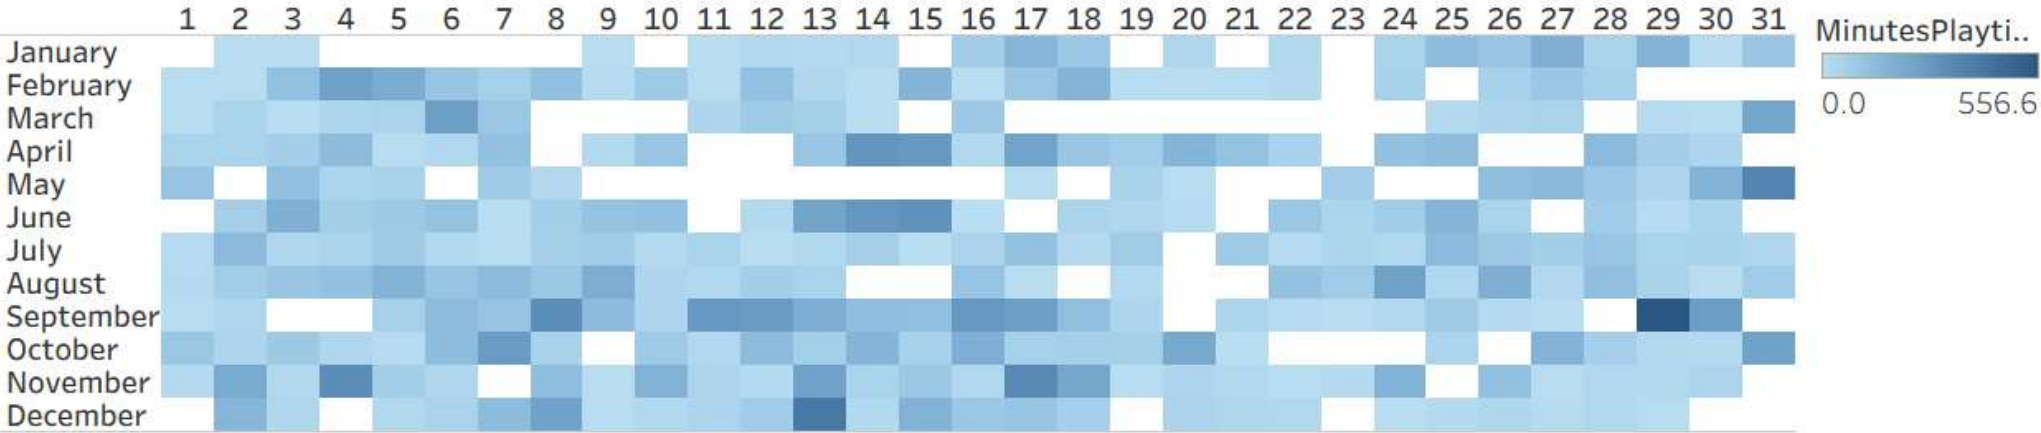

MinutesPlaytime for each End Time Weekday. Color shows details about End Time Weekday.

Day Of Week	
Sunday	42
Monday	83
Tuesday	67
Wednesday	43
Thursday	51
Friday	49
Saturday	55

Mondays had the most streaming time of any day, with 5,016 minutes (83 hours).

Followed by 4,078 minutes (approx. 68 hours) on Tuesdays.

listening days

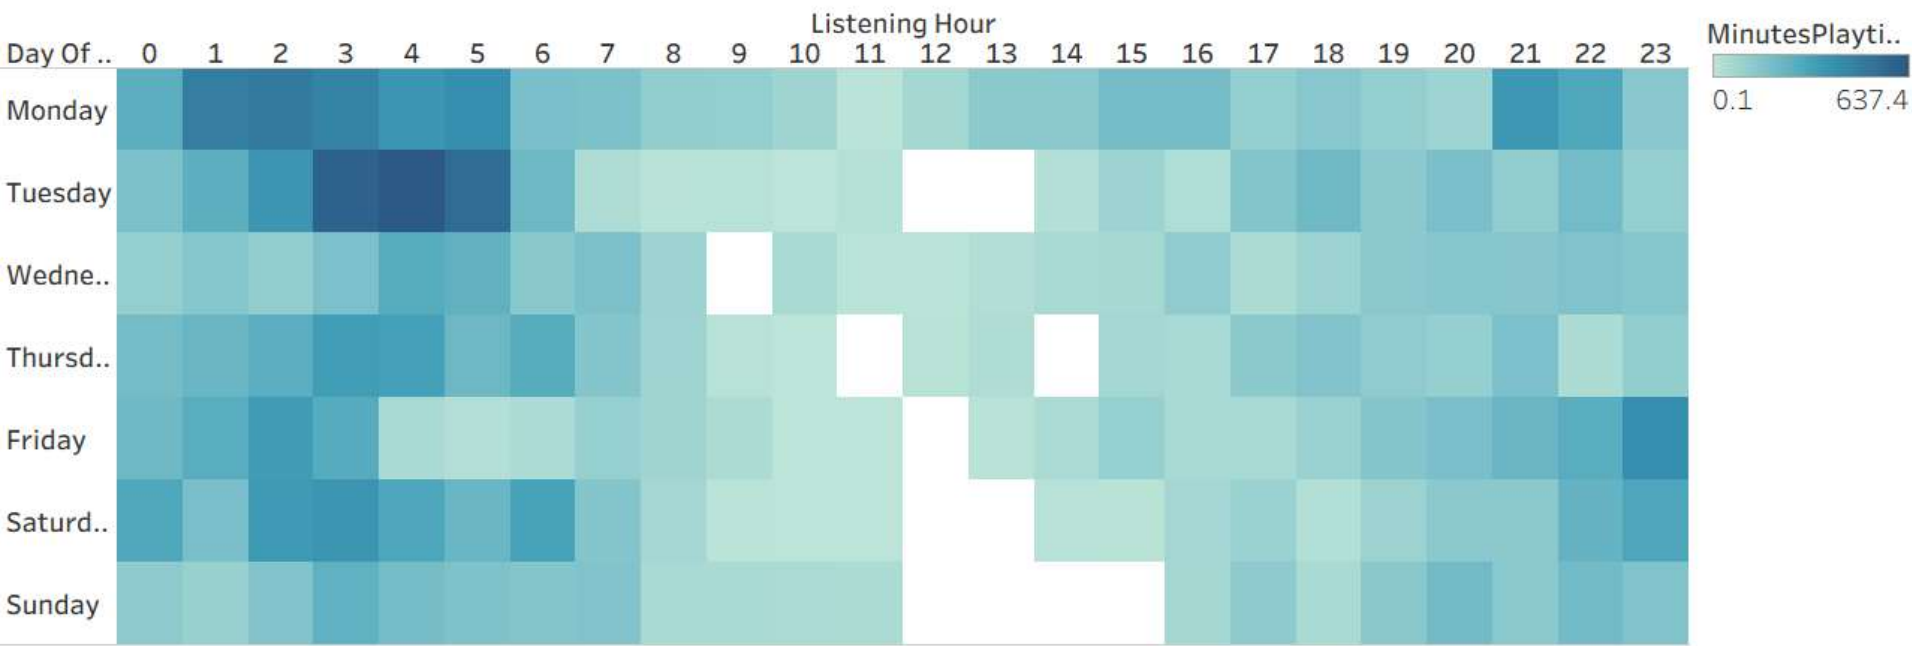

MinutesPlaytime (color) broken down by End Time Day vs. Months Month.

A breakdown of listening patterns for every single day of 2025. Days of the month are compared with the total minutes spent listening to music. Blank (white) spaces show zero listening, and dark spaces have longer times.

September 29 had the longest listening time: 556.6 minutes, or 9.3 hours. Unsurprisingly, that day was a Monday!

time of day listening

MinutesPlaytime (color) broken down by Listening Hour vs. Day Of Week.

This chart shows when I listened to music, broken down by the hour of the day. 0 represents midnight, 1 represents 1 AM, 23 represents 11 PM, etc.

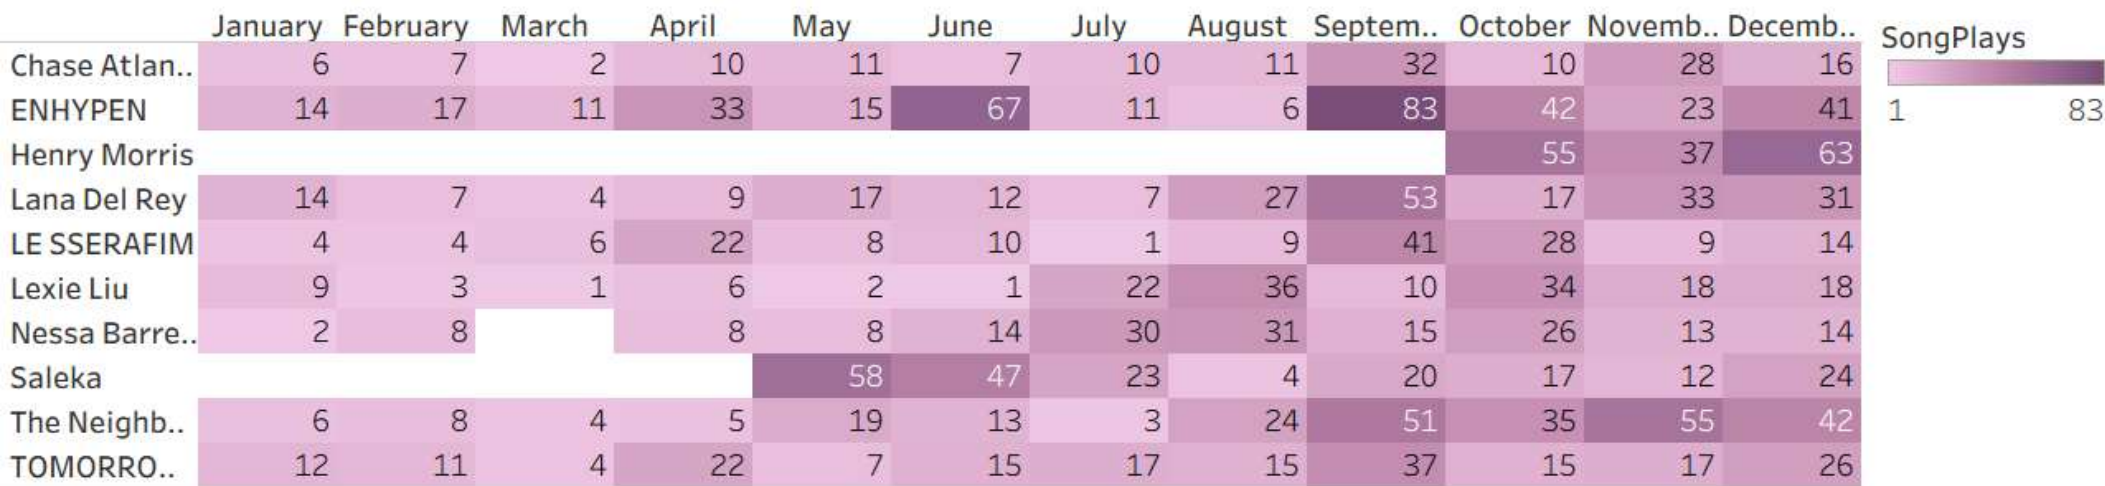

Tuesdays from 3 to 6 AM were my highest listening block with 592.2, 637.4, and 551.9 minutes, respectively.

Top tracks by individual song plays (listens)
